

# Scolmore Flow Range Hits New Heights

Scolmore is delighted to have been able to lend its support to a very worthwhile cause, when products from its Click Flow range were installed at the brand new Kent Multiple Sclerosis Centre in Canterbury.

A combination of Flow junction boxes, ceiling rose connectors and fast fit cord grips have been installed above every suspended ceiling in the new centre.

Paul Hooker from Marc Carney Electrical Contractors, responsible for the installation commented: "With the emphasis today on flexibility and ease of installation, many building projects are now focussing on products and services that can adapt to changing legislation, energy efficiency and the

ever changing needs of the client. We chose Scolmore's Flow Connector products primarily because of the flexibility they offer and the fact that they are so easy and quick to install."

The Kent MS Therapy Centre, is a self-supporting charity aimed at improving quality of life for people with Multiple Sclerosis. Funding for the Centre comes from donations, from members of the public, businesses and institutions and fundraising is a constant struggle. Having reached their New Building Appeal target at the beginning of 2013, work commenced on site in Canterbury and the new therapy Centre is due to open early in 2015.
